PROFESSIONAL SUMMARY

Software Engineer with 5+ years of experience designing and delivering enterprise-scale financial technology solutions across private credit, investment operations, portfolio management, financial reporting, workflow automation, and data engineering. Proven expertise building modern React and .NET applications, investment data platforms, reporting solutions, SQL Server architectures, and AI-powered automation tools supporting front-, middle-office, and operations teams. Currently leading technology modernization at MGG Investment Group, transforming spreadsheet-driven processes into scalable platforms and building intelligent agents that automate reporting, reconciliations, document processing, and workflow execution.

CORE EXPERTISE

Financial Technology: Private Credit, Alternative Investments, Investment Operations, Portfolio Management, Trade Lifecycle Management, Securities Processing, Borrower Management, Fund & Investor Reporting, Capital Markets Technology

Software Engineering: C#, .NET Framework, ASP.NET, React.js, TypeScript, JavaScript, REST APIs, Microservices, Multithreading, Object-Oriented Design

Data Engineering: SQL Server, ETL Development, Data Warehousing, Data Modeling, Data Validation, Data Reconciliation, Data Migration, API Integrations

Artificial Intelligence: OpenAI, AI Agents, Agentic Workflows, RAG Applications, Prompt Engineering, NLP, Conversational AI, Intelligent Automation

Cloud & DevOps: Azure, Azure Data Factory, GitHub, Docker, CI/CD, Agile, Scrum

PROFESSIONAL EXPERIENCE

MGG Investment Group LP

Jun 2024 – Present

Financial Technology Software Engineer

New York, NY

- Lead development of a centralized investment operations platform supporting portfolio managers, traders, finance, and operations users across private credit portfolios.
- Architect full-stack enterprise applications using React, .NET, SQL Server, and REST APIs, replacing fragmented Excel-driven workflows.
- Design and implement investment data platforms supporting securities, borrowers, funds, entities, cash flows, fees, portfolio positions, pricing, and performance analytics.
- Build scalable ETL and data integration frameworks connecting DealCloud, iLevel, FTP/SFTP feeds, portfolio systems, and third-party financial platforms.
- Develop automated trade lifecycle workflows including validation, reconciliation, transfer processing, exception handling, and operational controls.
- Engineer SQL Server solutions using advanced indexing, stored procedures, and views, improving reporting performance and data availability.
- Create borrower-, security-, portfolio-, and executive-level reporting solutions, plus operational dashboards delivering real-time visibility into investment activities.

AI & Intelligent Automation

- Design AI-powered operational assistants leveraging OpenAI APIs and Large Language Models (LLMs).
- Build intelligent agents automating operational reporting, portfolio inquiries, reconciliations, workflow execution, and document retrieval.
- Develop conversational AI interfaces enabling business users to retrieve investment and operational information via natural language.
- Implement agentic workflows that streamline repetitive finance and operations activities, improving productivity and decision-making.

Technologies: *React.js, TypeScript, C#, .NET Framework, ASP.NET, SQL Server, OpenAI, Azure, REST APIs, DevExpress, GitHub*

Odessa

Jan 2021 – Jan 2023

Senior Software Engineer

Bangalore, India

- Developed enterprise financial software for global banking, equipment leasing, and financial services organizations on the Odessa LeaseWave platform.
- Designed and developed full-stack applications using React, C#, .NET, SQL Server, and REST APIs.
- Implemented critical financial modules supporting taxation, lease accounting, invoicing, payment processing, collections, contract management, and financial operations.
- Created API integrations connecting LeaseWave with ERP, accounting, CRM, payment gateways, and third-party applications, and built automated notification frameworks for real-time alerts and workflow approvals.
- Designed SQL Server stored procedures, reconciliation logic, business validations, financial calculations, and performance optimization components.
- Led financial data migration and reconciliation initiatives ensuring data accuracy and operational continuity across the SDLC.

Technologies: *React.js, JavaScript, C#, .NET Framework, SQL Server, REST APIs, LeaseWave, Azure DevOps, Agile, Jira*

Odessa

Jun 2019 – Jan 2021

Business Analyst

Bangalore, India

- Gathered and translated business requirements into functional specifications for enterprise financial software implementations through stakeholder workshops, process analysis, and requirement elicitation.
- Developed BRDs, FRDs, API specifications, process maps, and user stories, and coordinated UAT to ensure successful implementation of business requirements with engineering teams.

EDUCATION

University of Maryland, Baltimore County (UMBC)

May 2024

Master of Professional Studies (MPS), Data Science — GPA: 3.97/4.0 | Baltimore, MD | Coursework: ML, AI, Big Data Analytics, Data Engineering, Statistical Modeling

Lovely Professional University

May 2020

Bachelor of Technology (B.Tech), Computer Science | India

PROJECTS

AI Resume Analysis & Candidate Matching Platform — github.com/Jagadeesh-Sunkara/Resume_Analysis_Capstone

- Built an AI-powered resume evaluation platform using NLP, SpaCy, and ML, with NER extracting skills, education, certifications, and experience; LDA topic modeling and ATS-style compatibility scoring drove intelligent candidate-job matching and automated screening.

Technologies: *Python, SpaCy, NLP, Flask, Scikit-Learn, LDA*

Online Payment Fraud Detection System

- Developed ML models (Decision Trees, Logistic Regression, Random Forest) achieving 99.9% validation accuracy, identifying transaction fraud patterns and improving real-time detection. [Python, Pandas, NumPy, Scikit-Learn]

Bike Share Analytics using PySpark

- Built scalable PySpark data pipelines analyzing transportation usage trends and customer behavior, generating actionable insights from large-scale datasets. [PySpark, Python, SQL]

LEADERSHIP EXPERIENCE

- Vice President & Business Head — UMBC Product Management Club
- Project Management Fellow — bwtech@UMBC Research & Technology Park

TECHNICAL SKILLS

Languages: C#, Python, SQL, JavaScript, TypeScript, R

Frontend: React.js, TypeScript, HTML5, CSS3, JS ES6+, Responsive Web Design

Backend: .NET Framework, .NET Core, ASP.NET, REST APIs, Microservices, WinForms, WPF

Databases: SQL Server, Oracle, MongoDB

Cloud: Azure, Azure Data Factory, AWS

AI & Automation: OpenAI, AI Agents, Agentic Workflows, RAG, LLM Apps, NLP, Prompt Engineering

Analytics & Reporting: Power BI, Tableau, Excel, Financial & Operational Reporting

Tools: GitHub, Azure DevOps, Jira, Confluence, Postman, Docker
